

## **View Line Tachometer Program**

To program the Tachometer there is a button hanging behind the panel.

1. The panel needs to be off
2. Press and hold the button hanging behind the panel
3. While still holding down the button, turn on the panel
4. The words pulse will show
5. Let go of the button
6. Press the button again for about 3 to 4 seconds
7. Pulse will go away and numbers will appear
8. Input the number of teeth on the flywheel for Magnetic or pulses if Alternator or Signal Pulse
9. Click the button to change the number
10. Holding down the button will lock the number in and jump you to the next
11. Make sure to input 159.0 and lock in even the zero
12. The numbers should disappear after you are done
13. It is recommended to turn off the panel and go back into the pulses screen to verify the numbers have been saved
